

Founded in 1986, **Coler & Colantonio, Inc.** is a multidisciplinary firm of engineers and scientists providing high quality engineering services across a diverse range of market segments, geographic locations (both domestic and international) and project types. We have established client bases in the energy, private and public market sectors. In the energy sector we perform feasibility studies, survey engineering, permitting & design services associated with the distribution of energy in pipelines; as well as offering a full range of asset management software. In the private sector, we offer services associated with environmental sampling and cleanup, permitting, surveying & design and construction of commercial buildings and residential subdivisions. In the public sector we offer a full range of services associated with roadways, environmental assessment and remediation, water distribution and treatment, wastewater collection and treatment and software for municipal functions. We are also able to offer design/build services through a wholly owned subsidiary.

We are currently looking for field survey crew associated with utility corridor projects. Primary responsibility will be running the total station and functioning in a two and/or three-person crew. Positions are on location (mostly in the Northeast) and Per Diem is paid to offset cost of living on the road. Both interns and recent grads welcome.

Pre-employment background and drug screening required for all positions. If you are interested in any of these opportunities, please forward your resume and cover letter to hr@col-col.com and reference EIMS509psu.

Description:

Conduct land survey by applying the principles and theories of math, science & engineering. Perform calculations and document findings with detailed and accurate field notes. Utilize surveying equipment, including GPS and GIS and mechanical equipment to capture line of sight readings and curvature of the earth readings.

Position requires long hours and physical ability to hike through a variety of terrains while carrying equipment of approximately 50 pounds. Prior experience with survey and mapping terminology and the use of coordinate-based information strongly preferred.

Coler & Colantonio, Inc. is an Equal Opportunity Employer.
